QUALITY FACTORS FOR *Aetna Slot-wall* PANELS

Aetna Slot-wall panels are manufactured using only first quality MDF (medium density fiberboard). Although industry standards require a minimum Internal Bond of 90 PSI, we use MDF with an average Internal Bond of 105 PSI.

To slot the panels, we use Diamond Tipped cutting tools and the panels are slotted on precision equipment. The result is ***Slot-wall*** panels that have precise slot dimensions and all slots are properly located from panel to panel. This ensures that the slots on one panel will line up properly with an adjacent panel.

For most retail applications, standard ***Slot-wall*** panels have proven to be strong enough for display of merchandise. The use of our PVC insert or Aluminum insert will increase the hanging strength. Our aluminum extrusions are .040" thick and conform to the shape of the slot resulting in greater hanging strength for the ***Slot-wall*** panel.

Face materials available include: Real hardwood veneers, high pressure laminates, melamine and paint grade MDF. Using Wilsonart brand laminate for the faces allows a wide range of colors, patterns, woodgrains and finishes. The lead time is lessened due to prompt availability of the laminate.

Other standard specifications are as follows: Groove spacing is 3" on center. Customized spacing is available in other configurations. Panel size is 48x96. Virtually any special size is available on custom order. Panel thickness is 3/4". For divider walls and displays, 1-1/2" panels are grooved on both sides and available on custom order.

Aetna Slot-wall is manufactured locally in Chicago. More than 30 years of experience in manufacturing ***Slot-wall*** and millions of square feet in the field indicates that ***Aetna Slot-wall*** panels will perform to your complete satisfaction.
