

TRICEL Honeycomb

Lightweight materials and innovative ways to incorporate them into new product designs are becoming increasingly important in a wide range of industries. Tricel Honeycomb provides an extremely strong and recyclable option for greatly reducing weight, while maintaining structural integrity.

TRICEL Honeycomb's versatility makes it ideal for solving design challenges in a vast range of industries including: Automotive, Construction, Transportation, Contract Office Furnishings, Marine Applications, Trade Show Booth and Exhibit Building, Signage, Displays, and Packing.

Honeycomb and the appropriate facing materials can provide exceptional acoustic and thermal insulating properties. Other features which contribute to the versatility of TRICEL include:

- A wide range of specifications – basis weight of kraft paper, honeycomb thickness, cell size, and resin content can all be matched to the application.
- Different thickness – from .4" to 5" in increments of .005".
- Phenolic resins – to enhance strength and to help resist moisture, fungus, insects, and vermin.

In addition, Honeycomb cores are easy to handle. They can be cut with a knife, band saw, or power saw. They are also very cost effective, making them an ideal alternative when fiberglass, particleboard, foam, Balsa, or plywood is cost prohibitive.

Please call your sales representative for this versatile and lightweight material.
