

## Lamello Zeta P2 System

### Features:

- Trademark P-System Vertical Mechanical Drive. The vertical mechanical drive consists of highly precise rotary parts supplied by Lamello. It creates an eddy current, driving the stroke movement.
- P-System Anchorage
- Tool-free anchoring of connectors, without adhesive or screws.
- P-System Depth Adjuster
- Extremely fast rotation to set different depths for the P-System joining elements: 10, 12, 14, 15 or 18.
- Use Zeta P2 for standard wooden biscuits by rotating the P-System depth adjuster to OFF to switch off the vertical mechanical drive. The 7 mm P-System cutter is replaced with the 4 mm groove cutter.
- Swiveling Front Stop with Fixed Pivot Point
- Join reliably with the cutter which is in the exact center between to two application surfaces
- Multifunctional Stop Square
- In addition to vertical stability resulting from the larger contact area, the stop square enables variable adjustment of the groove position, 0-50 mm.

### Benefits:

- Extremely fast joining method using a power tool
- Rapid, simple, and precise
- Identical grooves on both work pieces, saving time by removing the need for depth adjustments and minimizing the risk of errors
- Connector system with innovative profile groove technology greatly reduces labor time while also negating the need for additional fastening materials
- 5 different cutting depths for various connecting fittings
- Also compatible with biscuits and other 4 mm fittings
