

The Advantages of TFL

Thermally Fused Laminate (TFL), also referred to as melamine, is most commonly used in cabinets, closets, office furniture, store fixtures and more. It can be used as both a decorative surface as well as a construction material. It is easy to work with and can be easily fabricated on typical panel processing equipment.

A key advantage of TFL is matching abilities with HPL as well as material price and labor savings. Since TFL is prelaminated, there is no need to lay up the panel.

TFL comes in a myriad of colors and textures. Woodgrains help eliminate a step for the fabricator who would normally have to paint or stain wood veneer or hardwood. This offers considerable time savings and labor costs.
