

Hovr Bracket System

TOUGH & DURABLE.

Made from Aircraft Grade aluminum, Hovr bracket has the ability for a max weight load of 300lbs at an 8-inch depth. This allows for your clients to be confident in your floating shelf design.

THE CURRENT STANDARD VS. THE HOVR BRACKET SYSTEM

The current standard for floating shelves and other floating solutions is designed with a 2-prong system. This design causes major weaknesses within the floating solution. The average load capacity is 50lbs.

The Hovr Bracket System uses a male and female bracket that interlock and screw together to form unparalleled strength. Hovr uses both aluminum extrusion and steel bend depending on what is required. The average load capacity is 300lbs.
